#1)write a code to implement plaindrome for numbers

```
num=int(input("TO eNTER THE NUMBER :"))
s=0
temp=num
while(num>0):
   r=num%10
   s=s+r
   if num>9 :
      s=s*10
   num=num//10
print ("The value is :",s)
if s==temp :
   print("It is an palindrom number")
else :
   print("It is not an palindrom number")
```

Output:

TO eNTER THE NUMBER :345

The value is : 543

It is not an palindrom number

TO eNTER THE NUMBER :545

The value is : 545

It is an palindrom number
